

What is Origin Laser Tools All About?

American-made

1. Doing what America does best: leading the way with innovation for a better tomorrow.
2. Exercising American manufacturing muscle: high-speed machining, diamond-turning, and precision-molded aspheric optics.
3. Competing against European high quality, not Asian low price.
4. Personal accountability, rewarding jobs.

Superior patent-pending laser technology

5. Simplifies the layout process in building; saves lots of time on common jobs.
6. Reduces unnecessary steps and multiple tools/workers.
7. Advanced optics make our tools more accurate, compact and ruggedly portable.

Built-to-last sustainability with a 25-year warranty

8. We build tools to stand the test of time.
9. We combine sophisticated technology with traditional integrity.
10. We build tools of fundamental utility to the highest quality. No gimmicks.

Personal service

11. "Mom & Pop laser shop"; real people who care about your success. Direct to end user via internet sales at www.originlasertools.com.
12. OLT is not focused on being the biggest laser company; we want to make the best tools for people who care about the difference it makes.

Why are these things important?

American culture is built on independence and individuality - fertile ground for innovation. Keep an eye on OLT; we're just getting started.

These are manufacturing processes that America does particularly well, and which lend themselves to the manufacture of high-quality, medium-quantity products.

We aren't interested in fighting for the bottom of the quality barrel.

Among us is a highly talented workforce of craftsmen who embrace challenges, raising the bar of what is possible.

Reduces mistakes, saves money.

Some days just seem to go better than others. A better workday through better tools.

Other laser tools provide only a portion of the information needed for many common layout tasks.

Like our customers, we take responsibility for our work.

Finally, a laser tool made with the same integrity as the best builders.

There are a lot of things in life we can't predict, but if you plan to still be around in 25 years, this tool will be there, and it will still be useful.

Quality is an investment.
